

Business Case for Hiring Even Richardson

Executive Summary

Even Richardson is a highly driven AI Developer with strong project management acumen, trained in Python, TensorFlow, Docker, Keras, and full-cycle ML deployment. He blends technical execution with strategic foresight - delivering results that align directly with business needs in fast-paced, remote-first environments.

Challenge or Goal

Many teams struggle to find AI developers who can execute technical tasks while thinking strategically about integration, delivery speed, and stakeholder communication.

Solution

Even offers a rare mix of deep AI capability, rapid learning, and project framing. He applies structured thinking to coding challenges and uses business-first logic to drive decision-making in product development.

Cost

Estimated ramp-up time: 1-2 weeks

Preferred compensation: Competitive with junior-mid level AI roles

No relocation needed - remote-first setup ready

Benefits

- Strong PM communication + dev fluency
- Accelerated onboarding and independence
- Clean, documented code using best practices
- Full-stack perspective: code, infrastructure, and clarity
- Proven ethical mindset and purpose-driven career mission

Execution Timeline

Week 1: Environment setup, onboarding, tool familiarization

Weeks 2-4: Initial deliverables, collaboration testing, agile integration

Month 2: Ownership of assigned models/features

Month 3+: Optimization, automation, R&D contributions
