SWOT Analysis - Even Richardson, AI Developer Candidate

Strengths

- Strong foundation in Python, TensorFlow, Docker, and modern ML pipelines

- Blends technical execution with project management insight

- Clear communicator with strong documentation habits

- Remote-ready, self-disciplined, and ethically grounded

- Fast learner with demonstrated adaptability and creative problem-solving

Weaknesses

- New to the tech industry with limited formal work experience

- Still building confidence with large-scale, production-grade systems

- May require guidance in navigating enterprise environments or legacy systems

- Network and mentorship base still growing

Opportunities

- Can quickly scale into higher-level AI roles with the right mentorship

- Ideal candidate for startups or mission-driven teams seeking fresh energy

- Potential to evolve into a team lead or technical strategist

- Positioned to contribute to open-source, nonprofit, and ethical AI initiatives

Threats

- Competitive field with many experienced AI engineers

- Without early opportunities, skill growth may stagnate

- Risk of being undervalued due to non-traditional path

- May face bias from companies expecting conventional credentials or CS degrees
